

Fact Sheet

We are excited to share that Project Access Northwest has joined the **Healthier Here Network**. As proud partners, we can better serve the people in our community by collaborating with providers across health and social services.

Partners are connected through a shared technology platform to coordinate care and address people's social needs. Through this **Unite Us**-powered network, we will refer and connect our clients to the services they need, track outcomes of all electronic referrals and services delivered, and measure our community's impact. Consent is required from every person who has a client record in the network before information is shared.

Once a network partner identifies a person's social needs, it can instantly send a secure electronic referral to the most appropriate network partner(s) for that specific service. Partners involved in that person's care will have visibility into whether the referral is accepted and, once accepted, whether or not that person received the services and what happened as a result.

Referral process

Through the Project Access Northwest enrollment form, a patient can write their needs in their own words to request assistance in a particular field. They must also select the appropriate categories the request is for, to allow the best assignment of services to a particular partnered organization. Consent is required, and the referral must be signed or noted on form so it may be approved on the Unite Us platform. Referrals can also be written from the patient's health care team noting the need for these services.

Questions about the referral process should be directed to Yesenia at 206-496-1579 or yeseniam@projectaccessnw.org.
